

Your Time Line Profile begins on the next page. The Time Line Profile is so easy to read that it hardly requires any instructions: Calendar dates appear along the top and bottom, and there are 14 characteristics that are listed on the left side, such as "Athletic Performance", "Accident Proneness", etc.

Let's use "Athletic Performance" as an example. On some days there is no red color; it is just white. This means that there is nothing notable about athletic performance. It does not mean that you will perform badly, just that you are not likely to perform better than usual. On days when the pale pink color appears, athletic performance is a little better than usual. On days when the deep red color appears, athletic performance is highlighted; on these days you are likely to engage in physically challenging activities, and perform better than usual. Your athletic performance is likely to be excellent on days when the red color is very deep. The deeper the red, the better the performance.

On the days when a deep red color is shown for athletic performance, you are more likely to feel invigorated, your stamina and strength are high, and you have the capacity to do better, but astrological influences are not fatalistic and irreversible; it is up to you to best utilize the astrological influences that are available. In fact, great athletes often sense when they need to slow down or use a different strategy, and this ability to work with their strengths is one key to their success. So don't give up because a day does not look favorable, or think that you don't have to try because a day does look favorable! On the other hand, given a choice for an athletic competition, pick a day that is favorable and also, of course, do your best as well! I have used athletic performance as an example, but this principle applies to the other characteristics given in your Profile Time Line Report as well.

Given below are some notes on analyzing each of the characteristics in your Profile Time Line. In these notes we often talk about when a characteristic is "highlighted"; by "highlighted" we simply mean when the red color is given. Remember that even a pale red color does give some of the tendencies; the deeper the red color is, the stronger the tendency.

There is some "overlap" in the 14 categories. For example, very often days that are strong in "Athletic Performance" are also strong in "Business Success", or "Drive, ambition, work", or "Good Luck, Optimism". All 4 of these categories have something in common: you are likely to be energized and feeling more dynamic and full of zest than usual on all of these days. However, there are also significant differences between each of these categories, and on some days you will be strong in only some of these categories.

Similarly, "Imagination, confusion" and "Visionary, Inspired" are categories with some similarities. There are some similarities between other categories as well. Each category is described below. We also will mention some examples of what it means to be strong in 2 or more categories at the same time, or strong in one and weak in another.

Athletic Performance: On days when the deep red color appears you are likely to feel confident, invigorated, and having the right "touch" to play well or undertake almost any kind of challenging physical activity.

Business Success: On days when the deep red color appears you are likely to feel confident, you have good common sense, and opportunities just seem to come to you more easily. If "Athletic Performance" is also high, your confidence and ability to make good decisions in almost any area of life is very strong.

Drive, ambition, work: On days when the deep red color appears you are focused on achieving

things, you easily become impatient with others who distract or delay you, and you find it difficult to just sit back and relax. If "Business Success" or "Athletic Performance" is also high, your efforts are likely to bring immediate rewards; otherwise, this is a good time to work and accomplish things, but the rewards are more likely to be subtle or come later.

Good Luck, Optimism: On days when the deep red color appears you have a knack for being in the right place at the right time, and you are likely to frequently feel particularly exuberant, humorous, or optimistic on these days. If "Business Success" is high, this is a great time to move forward with business plans, purchasing plans, etc. If "Athletic Performance" is high, a little good luck is likely to accompany your skill to ensure that you do very well. Don't get too wildly speculative though, especially if "Mental Acuity" (described next) is not highlighted, or if "Imagination, confusion" is highlighted.

Mental Acuity: On days when the deep red color appears you are mentally sharp, able to concentrate well, and able to grasp new ideas and concepts. These are good days to take exams or tackle a problem that you need to solve. If Business Success is high, you are very likely to make good decisions regarding work, career, purchases, investments, etc. If "Athletic Performance" is high also, then good reflexes and making good decisions in the athletic activity are very likely.

Imagination, confusion: On days when the deep red color appears your imagination is soaring. This is a good time to see a movie, read a novel, or explore philosophical and religious subjects. You can also inject new creativity and imagination into your daily affairs. If you rely too strictly on your intuition and do not use some common sense as well, however, you can make errors and mistakes; this is especially true if "Mental Acuity" is not highlighted.

Visionary, Inspired: This category is very similar to Imagination, confusion. These are also good days to see a movie, read a novel, or explore philosophical and religious subjects. Frequently days will be high in both "Imagination, confusion" and "Visionary, Inspired". However, days that are strong in the "Visionary, Inspired" category can be more overwhelming than days that are strong in "Imagination, confusion". A day that is high in "Imagination, confusion" can be a day when you do not feel particularly poetic or imaginative, but you are inclined to daydream or make errors in judgement. Days that are high in "Visionary, Inspired" can awaken a transcendent or mystical sensitivity, which can manifest as heightened or altered perceptions and great artistic sensitivity and vision. On days when the "Visionary, Inspired" category is strong, find some time to get away from the mundane daily chores, avoid alcohol and stimulants, and open your heart and mind to the immense, beautiful, magical, glorious world that surrounds us all the time but we often fail to see, and the untapped resources that too often lay dormant in most of us.

Emotional Sensitivity: This category is very similar to "Visionary, Inspired" and often days are high in both the "Visionary, Inspired" category and the "Emotional Sensitivity" category. The "Emotional Sensitivity" category, though, is strictly emotional, and often does not register in our awareness as inclining towards philosophy, religion, or even art and poetry. One may feel a longing in one's soul that is difficult to define, or a feeling of dissatisfaction. It is time to open the heart and let one's idealism find expression through works of beauty and love.

Romance and Sexuality: On days when this category is highlighted, romantic and sexual energy runs very high. If you are seeking romance in your life, there is a good chance you will find it on days when "Romance and Sexuality" is highlighted. If you are married or deeply involved with someone, you can have lots of fun together and spark some new excitement in

your relationship. If "Emotional Sensitivity" or "Visionary, Inspired" is also high, then a dreamy, romantic quality will flavor this time.

Physically sensitive: If you have physical sensitivities such as allergies, or if your health has been poor, you should avoid overly stressing yourself at these times. This is also a time when you can feel inspired and more imaginative than usual and very often the "Visionary, Inspired" category is also high at the same time. You are likely to feel a little off balance so to speak at this time, and others may take advantage of you, or you may deceive yourself. Follow your dreams now and make some time to get away from your daily routine, but be careful to make sure that you are also honest with yourself and with others, or else you can find yourself feeling drained, confused, or exhausted.

Friendship, Family: On days when the deep red color appears you are likely to feel happy and close to friends and family. This is a time to make peace and to simply enjoy the blessings of good friends and family. Domestic affairs are favored.

Relax, party, vacation: On days when the deep red color appears you are likely to feel like you need to ease up on your work schedule, take a little extra time to relax. You are in a sociable mood and enjoy the company of others. If "Drive, Ambition, work" is highlighted, you won't feel comfortable being unproductive, but you still feel sociable, and you are likely to have some new grand visions in regards to your work and career. There is likely to be some merit to your ideas, but they also tend to leave out important details and the patience needed to bring them to fruition. If "Visionary, Inspired" is also highlighted, then this is a time when you need to break out of your routine to explore some different horizons.

Solitude, withdrawal: When this category is highlighted, you need some time alone. You may not need to physically isolate yourself; reading a book or working on a project of your own, for example, can be very rewarding now. Although seemingly subtle, the effects of having time to yourself are great in the long run: greater depth and wisdom are gained by having time to yourself, and when "Solitude, withdrawal" is strong, it is a good time to find this quiet time.

Accident Proneness: When this category is highlighted, you are impatient and rather erratic. You may not always be consciously aware of how edgy you are, but it can manifest as an accident. Don't hide yourself in your room in fear of an accident! Take a more moderate approach: avoid risky situations and exercise greater caution. If you begin to feel very frustrated, remember that your frustration is probably exacerbated more by your impatience than the inadequacies of others. Avoid situations that require great patience; try to undertake those activities at another time, and involve yourself in activities where you can express yourself fully and feel like you are achieving something. If "Drive, Ambition, work" is also strong, you may feel better if you get to work early and leave late, avoid people who distract you with too much talk or other distractions, and you will be more able to get out of your system your need to make sudden and strong changes. If you are athletically inclined, this is a good time for athletic activity so long as it is not extremely dangerous and as long as you don't take it too seriously and become angry or frustrated while playing.

One danger in using your Profile Time Line is, ironically, that it may work too well! Some people have found the forecast to be accurate and consequently they rely very strongly on the Profile Time Line forecast. Keep in mind that the Profile Time Line does use an extremely sophisticated astrological analysis and we do believe it has validity, but astrological theory is growing and expanding quickly, and the formula used to create your Profile Time Line will be improved in the future, and the Profile Time Line has not yet been scientifically tested. In short,

we believe the Profile Time Line has validity and we use it ourselves, but it is not perfect and it will not always predict tendencies with 100% accuracy!

One other point should be made about your Profile Time Line: there are actually 2 indicators of intensity of influence. We have discussed one: how dark the red color is. The other indicator is how long the red bar is. On your Profile Time Line you will notice that sometimes the red bar appears for just a single day and sometimes it lasts for a week or more. A long-lasting influence will affect you more powerfully than one that goes by quickly. This makes intuitive sense when you look at your Profile Time Line: if you see a dark red bar that lasts 2 weeks, it gives you the feeling that this is more important than a dark red cell that covers just a single day. This feeling is correct; the longer lasting influence is more powerful. So look at both intensity of color and duration to get a sense of how strongly the influence will affect you. A long-lasting influence that becomes completely solid red is extremely powerful.

A Profile Time Line can be run for periods of time from one month to one year. A Profile Time Line for a single month allows you to see each individual day clearly. There are thin lines after each 7 days of the month; on a printout of one or two months, these thin lines dividing each 7 days help you see exactly on which day the characteristic is strongest. Of course, however, there is an advantage to having a printout of the entire year instead of one or two months: you can see an entire year at a glance, and you can see when each characteristic is strongest during the year. Most people find that viewing an entire year gives them sufficient information but some people do like to view individual months to see very precisely the days on which each characteristic is strongest.

Technical note for astrologers: Your Time Line Profile is based on progressed-to-progressed aspects.
